SUMMARY

Full-Stack Developer with 3+ years of experience at Algar Telecom, building Urano V2 — a high-availability SMS and voice campaign platform averaging ~100k messages per hour during campaigns over a database of 10M+ records — with Java 21, Spring Boot, Vue.js and Oracle/MySQL. Experienced in microservices, query and performance optimization, load testing, design patterns and CI/CD. Single-handedly designed and built MarisCorrige, a school management platform in production with 130 active students, on a 5-microservice Java architecture with JWT and rate limiting. I use AI tools (Claude Code, GitHub Copilot) in my workflow to ship faster without compromising quality. Pursuing a B.Sc. in Computer Science at UFU (expected 07/2027).

PROFESSIONAL EXPERIENCE

Junior Full-Stack Developer

Algar Telecom | 02/2025 – Present | Uberlândia, Brazil

- Develop Urano V2, a high-availability SMS and voice campaign platform (~100k messages/hour on average during campaigns; 10M+ records), building REST APIs in Java 21/Spring Boot and the Vue.js frontend.
- Contributed to a performance overhaul of the sending engine (multithreading + a custom in-house processing queue, no external broker) that made message delivery about **10x faster** than the previous version.
- Optimized report generation (multiple Oracle queries), cutting large reports from ~5 to under 3 minutes (**~1.8x faster**); implemented asynchronous Excel report generation with status polling.
- Ran JMeter load tests on the message-intake API, uncovering missing Oracle indexes that caused timeouts (ORA-01013), and optimized the main messages view (UNION query).
- Refactored SMS routing across multiple providers using the Factory and Strategy patterns, decoupling each integration's logic.
- Lead the migration of legacy SMS services (Kannel) to Urano V2 and tune Oracle and MySQL performance (indexes, views, DDL scripts, JPA/HikariCP connection pooling).
- Took part in Urano V2 development meetings from start to finish, including architecture and business-rule decisions.

Software Development Intern

Algar Telecom | 07/2023 – 01/2025 | Uberlândia, Brazil

- Built REST APIs in Java 17/Spring Boot within a cross-functional agile squad (Scrum).
- Built a complete Python/Flask web application for data lookup, integrating relational databases and low-code (Oracle APEX).

PROJECTS

MarisCorrige — School Management and Automated Grading Platform

Personal project in production, 130 active students | 08/2026 – Present

- Single-handedly designed and built a 5-microservice architecture in Java 21/Spring Boot 3 (gateway, authentication, classes, assignments, notifications), each with its own PostgreSQL schema.
- Secured the API with JWT (Spring Security + JJWT) and an in-memory rate-limiting filter (Bucket4j) with scan detection and automatic IP blocking, validated with automated tests (JUnit 5, AssertJ).
- Automated grading of objective questions and PDF report-card generation (OpenPDF); integrated automatic email notifications (Resend) with scheduled jobs.
- Built the mobile-first frontend in Vue 3/TypeScript/Pinia/Tailwind CSS and deployed the system with Docker Compose and managed PostgreSQL (Supabase).

EDUCATION

B.Sc. in Computer Science — Federal University of Uberlândia (UFU), Brazil
Expected graduation: 07/2027 (coursework completed in 2026; only the final thesis remaining) | Hybrid program, completed alongside full-time work
Courses: Alura (Git and GitHub; Spring Boot 3 – REST API Development in Java; Spring Boot 3 – Best Practices and REST API Security) | Rocketseat (Full-Stack Program; Python Program)
Competitions: Programming contests (ICPC-style, 2021–2023) — algorithms, data structures and complexity analysis.

TECHNICAL SKILLS

Languages: Java (17, 21), TypeScript, JavaScript, Python, SQL
Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Spring Cloud Gateway, REST APIs, Microservices, JWT, Multithreading, Flask, SMPP (SMS messaging)
Frontend: Vue.js 3, TypeScript, Pinia, PrimeVue, Tailwind CSS
Databases: Oracle SQL, MySQL, PostgreSQL, query optimization, indexes and views, HikariCP
Testing and Quality: JUnit 5, Mockito, AssertJ, JMeter (load testing), Design Patterns (Factory, Strategy)
DevOps and Infrastructure: Docker, Docker Compose, CI/CD (GitHub Actions, Bitbucket Pipelines), Grafana, Linux (Ubuntu), Apache (load balancer), SSH, systemd
Tools and Practices: Git, GitHub, Bitbucket, SVN, Conventional Commits, Scrum, Kanban
AI-assisted development: Claude Code, GitHub Copilot — coding, debugging and technical documentation

LANGUAGES

Portuguese: native | **English:** intermediate technical reading, basic conversation (actively improving)
